Afaq
FOUNDATION

A PRACTICAL GUIDE FOR THE WHOLE SCHOOL

System User Handbook

A clear, step-by-step guide to managing school operations, teaching, learning and family engagement with Afaq.

Administration | Finance | Teaching | Families & Learners

KNOWLEDGE • CHARACTER • BRIGHTER LIVES

Edition 1.4 | Reviewed 8 October 2026

WELCOME

One school. Connected workspaces.

Afaq brings school records and daily work into one system. Each person signs in to a workspace shaped around their responsibilities.

WHO USES AFAQ?

- **Administrator:** oversees school setup, records and approvals.
- **Finance Officer:** follows invoices, payments, fees and expenses.
- **Teacher:** manages assigned classes and records learning.
- **Parent:** follows linked children and school communication.
- **Learner:** accesses courses and personal learning records.

HOW TO USE THIS HANDBOOK

Start with the shared navigation guide, then follow the chapter for your role. The screen labels in **bold** match the app.

What you can see depends on your account, school setup and assigned permissions. Some pages may be empty until the school publishes or records information.

In this handbook

03 How work connects
04 Governance roles and boundaries
05 Create and onboard a madrassa
06 IT security operations and rollout
07 Sign in and move around
08 Administrator: school setup
09 Administrator: review and publish
10 Finance Officer: invoices and payments
11 Finance Officer: fees and reporting
12 Teacher: classes and daily records
13 Parent: follow a child's school journey
14 Learner: courses and progress
15 Learning content and media
16 Troubleshooting common issues
17 Role quick-start checklists
18 Key terms at a glance
19 Good practice and help
20 Platform console: current capabilities
21 Company access: suspend and restore

Availability note. Features can differ by app version and school setup. Some workflows in this guide may still be under development; use the actions available in your deployed app or confirm availability with the school administrator.

FROM RECORDS TO OUTCOMES

How work connects across Afaq.

Afaq connects school staff, families and learners through shared records. Each role completes its part; review and access rules control what happens next.

01 · STUDENT LEARNING RECORD

Admin sets up class and access › **Teacher records attendance and learning** › **Admin reviews and publishes** › **Parent views the result**

An assessment or report starts as teacher work in progress. Families see the approved version after administrator publication.

02 · FEES AND PAYMENT TRAIL

Finance checks fee and invoice › **Payment is submitted through configured channel** › **Finance verifies recorded status** › **Parent checks invoice or receipt**

A fee structure is a rate, not an invoice. A payment is confirmed only when its recorded status says so; a pending attempt is not proof of collection.

03 · ONLINE COURSE AND LEARNER ACCESS

School prepares course and lessons › **Access rules make lessons available** › **Learner studies and marks completion**

For paid access, the learner may request access and follow the course invoice. Office approval or confirmed payment can grant access, according to the school's configured flow.

Status changes matter. Saved, submitted, under review, published and confirmed describe different stages. Check the status on the record before telling a family that something is final.

TARGET OPERATING MODEL · PARTLY IMPLEMENTED

Three responsibilities. Clear boundaries.

Keep platform operation, school administration and security operations separate. A role should receive only the access needed for its duties.

PLATFORM

Super Admin

Governs the Afaq service across madrassas: tenant onboarding, platform-wide configuration, service plans, platform-level incidents and aggregate service health.

SCHOOL TENANT

Madrassa Admin

Governs one madrassa's people and operations: local users, classes, assignments, school records, approvals and school-level policies.

COMPANY OPERATIONS

IT / Security Operator

Protects and operates the technical service: logs, monitoring, alerts, vulnerabilities, backups, incident response and security evidence.

Target authority and limits

Super Admin

- Create, configure, suspend or restore madrassa tenants under approved policy.
- Manage platform-wide settings, service status and escalation.
- View aggregate tenant/service health; tenant-content access is not part of routine oversight.
- Approve exceptional cross-tenant support access only when necessary, scoped, time-limited and audited.

Madrassa Admin

- Manage users and records inside their own madrassa only.
- Assign staff roles and class/branch scope using least privilege.
- Review and publish school records; manage local settings and respond to school requests.
- Cannot create other tenants, change platform security settings or inspect another madrassa.

IT / Security Operator

- Operate infrastructure, monitoring, access controls, backups and security tooling.
- Review technical metadata and security logs for service protection.
- Cannot approve school reports, change grades, post payments or administer school records.
- Production data access requires an incident/ticket, approval, minimum scope, expiry and audit trail.

Existing school roles remain

Accountant, Teacher, Parent and Learner keep their current tenant-scoped duties. Platform or IT titles must not silently inherit these business permissions.

A Super Admin is not an all-purpose school user; IT is not a substitute school administrator.

The cards describe the target model, not a list of live permissions. See page 20 for implemented capabilities and deployment limits.

WHO CREATES A MADRASSA?

Approve first. Provision second. Activate last.

Current foundation: independent approval, IT creation of an inactive madrassa, and a read-only progress view. Invitation acceptance and activation logic are tested internally; email delivery is not connected.

School requests onboarding › **Super Admin verifies and approves** › **IT provisions tenant safely** › **First Admin accepts invite** › **Tenant activated**

1 · Request and approve · Console

- Super Admin records the school name, unique code and nominated admin email.
- A different Super Admin reviews and approves or rejects with a reason.
- Approval does not create a school or grant access. Verify ownership outside the form.

2 · Create inactive school · Console

- IT opens **Madrassa setup**, then **Review setup**.
- After checks pass, confirm **Create inactive madrassa**. Super Admin cannot execute this IT action.
- Status stays **PENDING_ACTIVATION**. A retry of the same application does not create a duplicate.

3 · First Admin · Internal foundation

- A private, one-use invitation expires after 24 hours; only its hash is stored.
- Acceptance creates a **DISABLED** school Admin, not a login session.
- The **/school-invitation** page is for testing. The acceptance API remains disabled; no email is sent.

4 · Activation · Internal foundation

- A Super Admin other than the requester checks the matching acceptance receipt.
- Record evidence and attest to isolation, access controls, audit, recovery and support checks.
- School and Admin activate together with audit. These are operator attestations, not automatic verification; no activation UI is connected.

Read the current onboarding status

ONBOARDING PROGRESS

Super Admin and IT can inspect completed milestones and the next pending stage.

INVITATION EXPIRED

A replacement is needed through the approved delivery workflow, not a shared token.

REVIEW REQUIRED

Investigate inconsistent or suspended access; do not bypass the checks.

Approval is not activation. An invitation record is not proof of email delivery. If creation times out, refresh the queue before retrying the same application. No live deployment or real invitation sending is implied by this handbook.

COMPANY IT / SECURITY OPERATOR

Protect the service. Prove what happened.

The IT function owns technical safeguards and response, not the madrassas' academic or financial decisions.

1 · Health and reliability

- Monitor API, database, queue, storage, media and payment integration health.
- Track availability, latency, error rates, capacity and backup completion.
- Test restore procedures; report outages and recovery status to stakeholders.

2 · Logs and audit

- Centralise authentication, privilege changes, admin actions, finance events and security alerts.
- Protect logs from alteration; restrict access and define retention and deletion schedules.
- Do not log passwords, tokens, payment secrets or unnecessary student/parent content.

3 · Threats and vulnerabilities

- Triage suspicious sign-ins, abuse, malware indicators and unusual cross-tenant access.
- Track dependencies, patches, secrets rotation and remediation deadlines.
- Escalate confirmed or suspected incidents through a documented severity process.

4 · Identity and change control

- Require strong authentication for privileged accounts and review access regularly.
- Use named accounts; prohibit shared Super Admin or operator credentials.
- Record production changes, approvals, rollback plans and maintenance windows.

Incident response and delivery plan

Detect and preserve evidence › **Triage and contain** › **Notify owners and investigate** › **Recover and review**

PHASE 1 · GOVERN

Name role owners, tenant boundaries, approval rules, incident severity and data-retention policy.

PHASE 2 · ENFORCE

Add platform roles, scoped permissions, MFA, immutable audit events and tested tenant-isolation checks.

PHASE 3 · OPERATE

Connect monitoring and alerts, rehearse incident/restore workflows, review metrics and improve controls.

Current boundary: the console reads platform audit events and database/Redis health. Threat detection, backup verification, incident workflows and emergency tenant access are not connected. Tested source code is not evidence of a production deployment; see page 20.

01 · GETTING STARTED

Sign in, then follow the page trail.

Open Afaq in the app or on the school website and sign in with the account details issued to you.

Open Afaq › **Enter your account details** › **Open your role workspace**

Move between pages

1. Use the left menu on a wide screen.
2. On a phone, use the bottom tabs or tap **More** to open the menu.
3. Use **Back** to return to the previous page and **Home** to return to your role overview.
4. Use **Refresh** if a page needs to reload.

Find learning content

Learners can search subjects and courses inside **My courses**. Record pages may also have their own search and filters, such as invoices or students.

The workspace menu opens pages directly. It does not search for dashboard pages.

Scroll with a keyboard

On web or desktop, use **Up / Down** for small steps and **Page Up / Page Down** for larger steps. **Space** moves down a page; **Shift + Space** moves up. **Home** and **End** jump to the top or bottom.

Keep focus on the page, not inside a text field. A focused button or control may use the same key for its own action.

If sign-in does not work

1. **Check the account details.**
   Use the school-issued phone number or email and password. Check for extra spaces.
2. **Check the connection.**
   The app must reach the school's Afaq service. Reconnect to the internet or the configured school network, then retry.
3. **Ask the school office.**
   Staff accounts and parent-child links are managed by the school. Public learner registration is only available if the school has enabled it.

Protect your account. Do not share a password or leave a signed-in account open on a shared device. Sign out from the account menu when you finish.

01 Set up the school workspace

Administrator · School records and day-to-day oversight

Begin with the school's core structure. Accurate classes, staff and subjects make later registers and reports easier to use.

Review Overview › Set up school records › Check assignments › Monitor activity

Students

Open **Students** to find and maintain student records. Confirm identity and class details before making a correction. Keep a reason when the form requests one.

Classes

Open **Classes** to review school classes and their assignments. Check the campus, teacher and class details so attendance and academic work are scoped correctly.

Teachers

Open **Teachers** to manage staff accounts, teaching assignments and workload. Assign the required class and subject before expecting class work to appear.

Subjects and courses

Use **Subjects** for the school subject catalogue and **Courses** for online learning content. Published courses and lessons become available through learner access rules.

A sensible setup sequence

1. **Confirm school structure.** Check campuses or branches, class names and reporting periods where available.
2. **Connect people to their work.** Verify staff accounts, class assignments and subject ownership.
3. **Review access.** Confirm that staff see their assigned classes and that families are linked to the correct students.
4. **Check the overview.** Use real counts and activity to spot missing setup before a new term begins.

Access is scoped. A user's role, school and branch assignments determine which records can be opened. If a record is missing, check the assignment with the office instead of sharing another person's login.

02 Review, approve and publish

Administrator · Academic oversight

Teaching records move through review steps so families see approved information and school reports reflect their source records.

Teacher records work › **Teacher submits** › **Administrator reviews** › **Publish for families**

Attendance

Use the attendance register and summary to review daily records. Unmarked students remain unmarked; confirm the class and date before assessing coverage.

Assessment Review

Open submitted assessment work, review class and reporting-period scope, then approve or return it according to the school's process.

Reports

Teachers prepare reports from attendance, Qur'an sessions and published assessments. Review the submitted snapshot before publishing it to parent and learner views.

Course access

Review course access requests, inspect linked invoices and notes, and apply the available decision. Payment confirmation may grant access through the configured workflow.

Before publishing a report

- Confirm the correct class, learner and reporting period.
- Refresh source records and check attendance, Qur'an and published assessment information.
- Read teacher feedback and the parent-facing preview for clarity.
- Publish only when the report is ready to be seen by the family.

Published reports are snapshots. Later source changes do not silently rewrite an already published report. Follow the school's correction process if an issued report needs attention.

Separate roles, separate duties. Qur'an session recording belongs to assigned teachers. Administrators review academic work but should not enter teaching observations on behalf of a teacher.

01 Follow invoices and payments

Finance Officer · Collections workflow

Use the finance home to spot follow-up work, then open the relevant record to check its current details.

Finance Home › **Invoices** › **Invoice details** › **Linked payments / receipt**

Home

Review the reported invoice count, collections, outstanding amount and expenses. Use shortcuts to open overdue invoices, pending payments and course access requests.

Invoices

Search, filter by status and move through the register. Open an invoice to check the learner, fee, due date, balance and linked payment history.

Payments

Filter by status or channel and inspect invoice-scoped payments. Open a payment to load its saved details. Completed payments can show an in-app receipt.

Course access

Follow requests for paid courses, check the linked invoice and office notes, and review the request's current status. Access follows the school's configured grant or confirmed-payment flow.

Work a payment question

1. Find the learner's invoice using the register search or status filter.
2. Open invoice details and follow the linked payment record.
3. Check the latest saved payment status and reference. Open the receipt when available.
4. Return to the list; filters remain in place for continued work.

> **If a save or network request times out, check the register before trying again.** An uncertain result could already have been recorded.

The finance workspace records and displays transactions. It does not initiate a charge, edit financial history or reconcile a payment provider.

02 Maintain fees and finance records

Finance Officer · Finance tools

Fee structures

Search the rate register, review active or inactive structures, and open a form to record a fee amount and billing cycle. Check the branch or school scope before saving.

Expenses

Record a positive amount, expense date and optional description. Use date filters and record details to review entries already in the register.

Financial reports

Select a year and review reported totals and monthly collections and expenses. Preview or save the available CSV export for further analysis.

Finance inbox

Review finance inquiries, search and filter by status, then update a request to NEW, CONTACTED or CLOSED as appropriate.

Before recording an expense

1. Check that the expense has not already been entered.
2. Confirm the amount, date and currency shown for the record.
3. Add a useful description when it helps identify the purpose.
4. Save once, then confirm the entry appears in the register.

A fee structure is a rate record. Saving it does not automatically create invoices. An expense record documents a cost; it does not transfer money from a bank.

Read financial totals carefully

- Summary totals reflect what the API reports for the selected period.
- Invoiced minus collected is a period difference, not necessarily today's debtor balance.
- Individual entries display their recorded currency. Do not add mixed currencies without conversion.
- CSV exports contain financial information. Choose an appropriate folder and recipient.

Maintain an audit trail. Use the official register and school procedures to investigate discrepancies. Do not treat an inquiry status as proof that a message was sent or a payment was received.

01 Teach from your assigned workspace

Teacher · Class-based workflow

Start from your Dashboard or My Classes. Class context follows you into the records used for that class.

Dashboard › **My Classes** › **Select a class** › **Record or follow up**

Dashboard and My Classes

Review today's teaching work, assigned classes and timetable. Open a class to reach its students and daily class tasks.

My Students

Search your assigned roster and open a learner profile. Use support notes for relevant follow-up; only access learners assigned to you.

Attendance

Select the class and date, then record each student's actual status. Unmarked students stay unmarked. Correct an entry through the available audited correction flow.

Qur'an Tracking

Select a class and learner, then record the specific reading, memorisation or revision session and observation. These are distinct activities.

Assessments

Choose the class and reporting period, record scores and feedback, review the draft, then submit it for administrator review.

Reports

Prepare a learner report from the selected class and period. Refresh source records, review the feedback and submit the draft for administrator publication.

Keep the class context visible. If you change classes, confirm the new class before creating or reviewing records. Choosing a learner also narrows the work to that learner.

Recording is not publishing. An assessment or report draft becomes visible to families only after it passes the school's review and publication process.

Teachers cannot enrol students, change staff assignments or edit the approved subject catalogue. Contact the school administrator if setup is missing.

01 Follow your child's school journey

Parent · Family workspace

Use the Dashboard for an overview, then open your child's records for detail. On pages that support more than one child, select the child before reviewing information.

Dashboard › **Choose child** › **Open a record** › **Contact school if needed**

My Children

Review linked child profiles, class information, attendance, academic progress and recent activity.

Attendance

Check recorded days, notes and teacher remarks. Contact the school if a date or absence note needs clarification.

Qur'an and academic progress

Follow teacher-recorded Qur'an sessions and published subject results. Teacher comments appear with the relevant learning record.

Reports

Open and download reports after the school publishes them. Drafts awaiting review are not shown as final reports.

Payments

Review your child's invoices and confirmed payment records. Open a record to inspect the current details or receipt when available.

Messages and updates

Read published school notices and contact your child's assigned teacher through the private conversation area.

Ask the right question

- **Missing child or wrong class:** contact the school office to check the family link or enrolment.
- **Attendance or learning record:** message the assigned teacher with the relevant date or subject.
- **Invoice or payment:** contact the finance office and include the invoice or payment reference.
- **Report not available:** ask whether the reporting period has been reviewed and published.

> **Privacy follows your family link.** The parent workspace shows records for children linked to your account. The school office manages those links.

01 Find a course and keep learning

Learner · Personal learning workspace

Use Home for your learning overview or open My courses to find a subject, search the course library and choose a lesson.

Home / My courses › **Find a course** › **View lessons** › **Read, watch or listen**

Search and filter

Search subjects or courses by title, subject or instructor. Use subject and access filters to narrow the library, then switch between Grid and List views.

Start or resume

Choose **Start learning** or **Resume lesson**. Afaq checks that the lesson is still available before opening it.

Course contents

Open a module and choose an available lesson. On a wide screen the contents sit beside the reader; on a phone they open in a compact panel.

Save completion

Use **Mark complete** when you finish. Opening, switching or leaving a lesson does not mark it complete automatically.

Understand course access

Available

Open the lesson and study.

Preview

Open the lesson labelled as a preview.

Access required

Follow the payment or school approval instructions shown.

Learning progress is specific. A lesson is complete only after a successful completion save. Teacher-recorded scores and Qur'an memorisation are shown separately from course progress.

If a course or lesson is missing, check the access label or ask your school. Do not use someone else's account to open restricted content.

COURSES, LESSONS AND MEDIA

Keep the lesson in one learning space.

The course reader keeps lesson notes, resources and playback together so learners can move through a published curriculum.

My courses › Course curriculum › Lesson reader › Course contents

Video and audio

Choose an available recording or load the lesson sample. Playback stays inside the lesson. Use play, pause, seeking and speed controls when available.

Documents and images

Select a resource in the lesson to read a PDF, view an image or open text. Return to the lesson notes when you are ready.

Choose another topic

Open Course contents, expand a module and select an available topic. The reader loads fresh lesson content and releases the previous media.

Adjust reading

Use the text-size controls in the notes or your device accessibility settings. Return to the curriculum when you want to review the course sequence.

A few playback tips

- Real lesson media is checked against your course access before it opens.
- Playback does not automatically start or mark a lesson complete.
- A sample video or audio is practice material, not the teacher's lesson recording.
- If playback fails, retry or contact the school with the course and lesson title.

Resume means continue with an available unfinished lesson. It does not restore an exact video timestamp. Use the player timeline to seek within a recording during the current session.

Teacher workflow around online courses

Teachers open **My courses** to work with their assigned online courses. School curriculum assignments and learner access are managed by the appropriate school role.

WHEN SOMETHING DOES NOT LOOK RIGHT

Check the record before you retry.

A quick, safe sequence for the issues users most often encounter. Your role determines which records and actions are available.

Cannot sign in

1. Check the school-issued email or phone number and remove accidental spaces.
2. Confirm your internet or configured school network is working.
3. Retry once. If it still fails, ask the school office to check the account.

A child, class or record is missing

1. Check the selected child, class, date, period and filters.
2. Refresh the page once and confirm the connection.
3. Ask the school to verify the family link, class assignment or publication status.

Payment is pending or unclear

1. Open the invoice and inspect its linked payment status and reference.
2. Do not submit another payment just because the first screen timed out.
3. Share the invoice or transaction reference with the finance office for verification.

Course or lesson is locked

1. Read the access label: available, preview, access required or locked.
2. For paid content, check the related request and invoice status.
3. Ask the school office to review access if payment or approval is already confirmed.

Video, audio or document will not open

1. Check your connection and try the lesson resource again.
2. Confirm the selected lesson has published content and that your access allows it.
3. Send support the course, lesson and resource name; never send your password.

My change or completion is not showing

1. Look for a saved or submitted confirmation before leaving the page.
2. Refresh and inspect the record status before entering it again.
3. For reports or assessments, check whether administrator review is still pending.

When contacting support: include your role, page name, approximate time and a safe record reference. Do not send passwords, full payment card details or another user's private information.

A FIRST-SESSION CHECKLIST

Start well in your workspace.

Use the checklist for your role to confirm you are in the right place and know the next useful action.

Administrator

1. Open **Overview** and check the school context.
2. Review **Students**, **Classes** and **Teachers**.
3. Confirm class and subject assignments are current.
4. Check pending assessments or reports before publishing.

Confirm: the correct school and reporting period are selected.

Finance Officer

1. Open **Home** and review the current summary.
2. Use **Invoices** to find the record needing follow-up.
3. Open linked **Payments** and verify the saved status.
4. Use **Fee structures**, **Expenses** and reports as needed.

Confirm: period, currency, invoice and payment reference.

Teacher

1. Open **Dashboard** and review today's work.
2. Choose the assigned class in **My Classes**.
3. Record attendance or learning against the right learner and date.
4. Submit assessments or reports for review when ready.

Confirm: class context and saved/submitted status.

Parent

1. Open **Dashboard** and select the right child.
2. Review attendance, Qur'an and academic progress.
3. Open published reports or invoice details as needed.
4. Message the assigned teacher or school office for help.

Confirm: child identity and report publication status.

Learner

1. Open **Home** or **My courses**.
2. Search by subject or course and check its access label.
3. Open a lesson and study its available materials.
4. Mark it complete and check that progress has saved.

Confirm: lesson access and completion status.

Role mismatch or missing page? Sign out and use your own school-issued account. Ask the school administrator to check your role and assignments; do not share another person's login.

SHARED LANGUAGE

Key terms at a glance.

These terms help staff, families and learners understand what a record represents and what its status means.

Learning content

Subject is a learning area, such as Qur'an or Mathematics. A **course** organises online learning for a subject. A **lesson** is an individual study unit inside a course.

Finance records

A **fee structure** defines a rate. An **invoice** records an amount due. A **payment** records an attempt or collection, depending on its status. A **receipt** is evidence available for a completed payment.

Work stages

Draft is being prepared. **Submitted** is waiting for review. **Under review** means a reviewer is checking it. **Published** is released to the intended audience.

Access and progress

Available can be opened. **Preview** is a limited sample. **Access required** needs payment or approval. **Locked** is not currently open to the learner.

Keep progress types separate. Course lesson completion, teacher-recorded assessment results, attendance and Qur'an learning records are different measures and may update at different times.

Use the record's current status. A term may be displayed differently by a school or workflow. When in doubt, open the record details or ask the responsible office.

EVERYDAY USE

Keep work clear and secure.

Before you save

- Check the selected learner, class and date.
- Review amounts, status and reporting period.
- Read the confirmation before submitting a form.
- Wait for a saved result before leaving the page.

When a page looks empty

- Refresh the page once and check the connection.
- Review the selected class, child, year or status filter.
- Ask whether the school has assigned or published the record.
- Use the page's retry action if a request failed.

Protect school information

- Use your own account and keep your password private.
- Open only the records needed for your role.
- Sign out on shared devices.
- Store downloaded reports and finance exports carefully.

Ask for support

- Contact the school office for account, family-link or class-assignment issues.
- Contact the finance office for invoices and payment records.
- Contact the assigned teacher about attendance or learning records.
- Include a page name and record reference; never send your password.

Common status labels

Draft

Saved for preparation; not yet final.

Under review

Waiting for the responsible reviewer.

Published / Confirmed

Available or recorded as the status indicates.

Need help? Contact the school using its official support route. Afaq does not display staff passwords or ask you to share them in a support request.

AFAQ FOUNDATION

Knowledge. Character. Brighter lives.

Afaq System User Handbook · Edition 1.4 · Reviewed 8 October 2026

IMPLEMENTATION SNAPSHOT · 8 OCTOBER 2026

A separate workspace for company operations.

Super Admin and IT Security use platform identities. Madrassa Admin, Accountant, Teacher, Parent and Learner remain school identities; school credentials do not grant platform access.

Built and tested, not deployed by this update. Ask the deployment administrator for the configured platform address. The app route is **/platform** (commonly **/#/platform** on web). No default platform password or public account registration is provided.

1 · Sign in securely

Use your named company account, password and six-digit authenticator code. The session lasts 15 minutes; sign in again when it expires. Never share passwords, setup keys or authenticator codes.

2 · Check your workspace

Super Admin: overview, applications, company accounts, audit, health and own sessions.

IT Security: Madrassa setup, approved onboarding progress, audit, health and own sessions. No school business permissions.

3 · Review madrassa applications

A Super Admin records the request. A different Super Admin approves or rejects it with a reason. A reviewed decision cannot be overwritten. Approval alone creates no school and sends no invitation.

4 · Inspect audit and health

Audit trail: filter by event, role and period, then open event details.

System health: inspect database and Redis availability. An unavailable response is not proof that services are healthy.

My sessions: close access you no longer need

1. Open **My sessions**, select your current or another session, and confirm revocation.
2. **Sign out all sessions** requires confirmation and affects your company account only.
3. If server sign-out cannot be confirmed, local sign-out still completes after the attempt. Other sessions may remain active; sign in and review them.

Still pending: email delivery, live invitation acceptance, activation review UI, company invitations, password/MFA recovery, threat detection and backup verification. See page 5 for the implemented onboarding stages. No tokens or staff passwords should be shared through support.

SUPER ADMIN WORKFLOW

Suspend deliberately. Restore independently.

These controls apply to IT Security company accounts only. They do not suspend madrassas, delete accounts or change school staff permissions.

Find company account › **Review access history** › **Record reason and confirm** › **Verify refreshed status**

Find the right account

Open **Company accounts**. Filter by **Account role** and **Account status**, or choose **Clear account filters**. Verify name, email and account ID before acting. A filter change returns to page one.

Review the evidence

Open **Access history** to read who disabled or restored access, when and why. Use **Older / Newer** for groups of 20 records and **Retry** after a failed request. Times are UTC; reasons are operator statements, not independently verified findings.

Disable IT access

1. Select an active IT account.
2. Choose **Disable IT account**.
3. Enter a 10–500 character reason, without secrets.
4. Choose **Confirm disable**.

Login is blocked and all its sessions are revoked. Status, revocation and audit commit together; an audit failure rolls the change back.

Restore IT access

1. A different Super Admin reviews the suspension and its resolution.
2. Choose **Review restoration**.
3. Record the review reason and choose **Confirm restore**.

The account must have enrolled MFA and a recorded suspension. Old sessions stay revoked; IT signs in again with password and MFA.

Protected boundaries. You cannot disable yourself or a Super Admin here. The suspending administrator cannot approve restoration. IT cannot list company accounts or read reason-bearing access history. Shared audit views omit these reasons.

When an action does not complete

Refresh and check the latest status before retrying. A changed record may reject the request; a denied restoration requires another authorised reviewer. Never treat a connection failure as confirmation of success.

History pages may shift when new events arrive; this is not a fixed forensic export. The history window closes at session expiry. Requests already in flight may finish after access is disabled. Do not use restoration as a substitute for investigating a suspected compromise.
